FITFORGE

Web Development — Project 02

Responsive Business Landing Page

Project Level	**Beginner**
Business Type	**Modern Fitness Club**
Primary Goal	**Create a responsive commercial landing page**
Technologies	**HTML5, CSS3, JavaScript, Bootstrap 5.3**
Project Focus	**Responsive design, usability and interactive features**

1. Project Overview

FitForge is a modern fitness club landing page developed for Web Development Project 02. It targets beginners, regular gym members, and performance-focused athletes. The website presents the business professionally, explains services and pricing, builds trust through testimonials, answers common questions, and encourages visitors to contact the club.

The landing page follows this commercial flow: Hero → Services → Benefits → Pricing → Testimonials → FAQ → Contact/CTA. The visual identity combines a dark energetic base with a lime accent to communicate strength and momentum.

2. Business Concept

FitForge is positioned as a modern fitness club offering a professional environment for different types of members. The website helps visitors understand the club, compare membership options, view customer experiences, and contact the business.

- Target users include beginners, regular gym members, and performance-focused athletes.
- Services and benefits are presented through a clear commercial layout.
- Pricing plans allow easy comparison.
- Testimonials provide social proof.
- FAQ answers common visitor questions.
- Contact tools provide a direct way to reach the business.

3. Project Objectives

- Build a professional multi-section business landing page.
- Use HTML5 for structure and CSS3/Bootstrap for design.
- Use JavaScript for interactive components.
- Create responsive layouts for desktop, tablet, and mobile.
- Demonstrate commercial website structure and clear calls-to-action.
- Prepare the project for GitHub and static hosting.

4. Website Sections

Section	Purpose
Navigation	Sticky navigation, smooth scrolling, active-section highlighting, and mobile hamburger menu.
Hero	Background image, headline, supporting text, and primary CTAs.
Services	Four service cards with icons and hover effects.
Benefits	Highlights the advantages and value of FitForge.
Pricing	Three plans with feature lists and a highlighted recommended plan.
Testimonials	Three or more testimonials with working arrows and dots.
FAQ	Five questions with JavaScript open/close accordion behavior.
Contact	Contact form with client-side feedback and embedded Google Map.
Footer	Business information, quick links, and social icons.

5. Main Functionalities

Functionality	Description
Sticky Navigation	Navigation remains visible while scrolling.
Smooth Scrolling	Navigation links move smoothly to selected sections.
Active Navigation	Current section is highlighted in the navigation.
Mobile Hamburger	Small screens use an open/close hamburger menu.
Testimonial Slider	Arrows or dots change the displayed testimonial.
FAQ Accordion	Questions open and close their answers.
Contact Feedback	Client-side feedback appears after form submission.
Responsive Layout	Content adapts to desktop, tablet, and mobile screens.

6. JavaScript Implementation

JavaScript makes the landing page interactive instead of purely static. The main JavaScript functionality includes mobile navigation, testimonial controls, FAQ accordion behavior, navigation interaction, and contact-form feedback.

- Mobile menu toggles navigation visibility on small screens.
- Testimonial slider changes testimonials through arrows and/or dots.
- FAQ accordion opens and closes answers when questions are selected.
- Navigation supports smooth movement and active-section behavior.
- Contact form provides client-side feedback.
- Browser Console should be checked for JavaScript errors.

7. Responsive Design

- Desktop — 1440px: full navigation, multi-column content, and spacious layout.
- Tablet — 768px: adjusted spacing and columns for medium screens.
- Mobile — 390px: hamburger navigation, stacked content, mobile-friendly buttons and readable typography.

8. Technology Stack

Technology	Purpose
HTML5	Semantic structure of the landing page.
CSS3	Custom styling, spacing, hierarchy, hover effects, and responsive adjustments.
JavaScript ES6	Interactive components and client-side behavior.
Bootstrap 5.3	Responsive grid, utilities, and components.
Bootstrap Icons	Interface and service icons.
Google Maps Embed	Business location in the contact section.
Unsplash	Image resources, subject to final licensing verification.

9. Folder Structure

```
fitforge/
├── index.html
├── style.css
├── script.js
├── README.md
└── assets/
```

index.html contains the page structure; style.css contains custom styling; script.js contains interactive logic; README.md documents the project; and assets/ contains supporting resources.

10. Local Setup and Execution

- Download or clone the project.
- Open the project in Visual Studio Code.
- Keep all files and the assets folder in their expected locations.
- Open index.html using Live Server or directly in a browser.
- Test navigation, mobile menu, slider, FAQ, and contact form.
- Use Chrome DevTools Console to check for errors.

11. Testing Checklist

- Navigation links reach the correct sections.
- Sticky navigation works during scrolling.
- Smooth scrolling works.
- Active navigation state changes correctly.
- Mobile hamburger opens and closes.
- Four service cards display with hover effects.
- Three pricing plans display and the recommended plan is highlighted.
- Testimonial arrows/dots work.
- At least five FAQs open and close.
- Contact form provides feedback.
- Google Map loads.
- Footer displays correctly.
- No JavaScript errors appear in Console.
- Layout works at desktop, tablet, and mobile widths.

12. Deployment

GitHub Pages

- Create a public repository such as tsg-webdev-p02-yourname.
- Upload index.html, style.css, script.js, README.md, and assets.
- Open Settings → Pages.
- Select the main branch and root folder.
- Save and copy the public URL.

Netlify / Vercel

Import the GitHub repository into Netlify or Vercel as a static site. No build command is required for this basic HTML/CSS/JavaScript project.

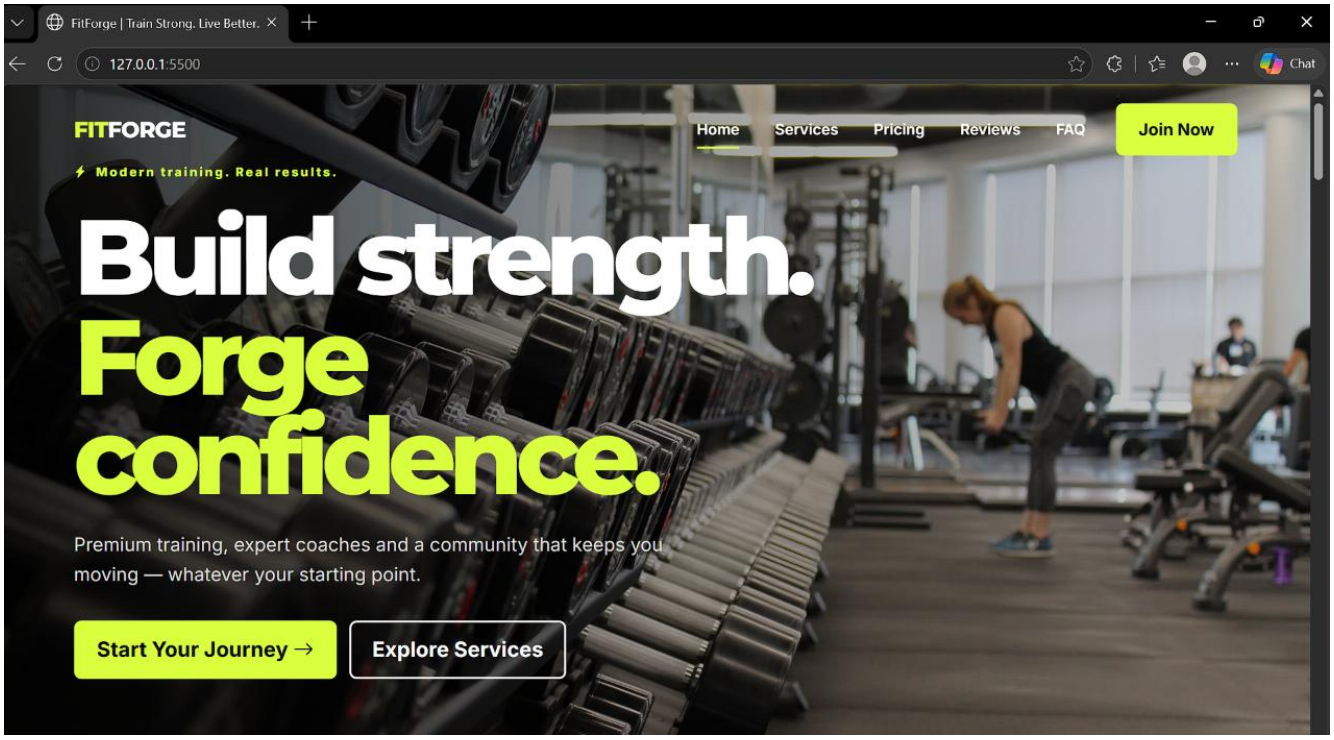

13. Lighthouse and Performance

Run Chrome DevTools Lighthouse on the live URL and check Performance, Accessibility, Best Practices, and SEO.

- Target a Performance score above 80.
- Check the Console for JavaScript errors.
- Optimize unnecessarily large images.
- Verify responsive behavior after deployment.
- Use the live URL for the final audit.

14. Required Screenshots

- Desktop: 1440px.

- Save screenshots as PNG/JPG.

15. Third-Party Assets and Credits

The project uses Unsplash images, Bootstrap Icons, CDN-hosted Bootstrap, Google Fonts, and Google Maps Embed. Before submission, verify current licensing and attribution requirements and include any required credits.

16. Submission Preparation

- Replace 'yourname' with the actual name in the required naming pattern.
- Make the GitHub repository public.
- Ensure the deployed URL is accessible.
- Include README.md.
- Include three responsive screenshots.
- Include the Lighthouse report or screenshot.
- Test all links in a private/incognito browser window.
- Keep submitted links live after submission.

17. Final Project Summary

FitForge demonstrates a responsive commercial landing page using HTML5, CSS3, Bootstrap 5.3, and JavaScript. The project combines a clear business journey with interactive features such as the mobile menu, testimonial slider, FAQ accordion, navigation behavior, and contact feedback. It is prepared for responsive testing, GitHub version control, static deployment, and Lighthouse evaluation.
